

1. Initially, for this project, I was working on a dynamic website that would help me simply generate 20 pages on their own with the information of the 20 congressional sessions. However, I changed my mind and decided to make 20 static web pages instead.
2. I had begun by only including the President in each congressional session. Later on, I added the Vice President and the Speaker of the House.
3. I had planned to do no visual representation for the House of Representatives and the Senate, but I ultimately chose otherwise and used squares to display the number of seats each party had in both chambers.
4. I used color Red to display Republican seats, and color Blue to display Democratic seats. However, after a few sessions, I saw that there were Independent Representatives and Senators too. I decided to use the color Gray to display Independent seats.
5. There were also some empty seats in the 116th and 117th Congressional Sessions. I used the color Pink to display empty seats.
6. I had a lot of trouble with determining the size of the squares to display the Senators and Representatives. I settled on having the width=10 pixels, height=10 pixels and border=1 pixel solid black.
7. At first, I was using Wikipedia to assign the number of seats. However, I decided to use the official government websites (<https://history.house.gov/Institution/Party-Divisions/Party-Divisions/>, <https://www.senate.gov/history/partydiv.htm>) instead to get more reliable information.
8. I was planning to also make separate pages about the midterm elections themselves, but I ultimately decided not to, instead sticking only to the Congressional Sessions.
